

NAME

CURLMINFO_XFERS_RUNNING – Number of easy handles currently running

SYNOPSIS

```
#include <curl/curl.h>
```

```
CURLMcode curl_multi_get_offt(CURLM *handle, CURLMINFO_XFERS_RUNNING,  
                             curl_off_t *pvalue);
```

DESCRIPTION

The number of easy handles currently running, e.g. where the transfer has started but not finished yet.

DEFAULT

n/a

PROTOCOLS

This functionality affects all supported protocols

EXAMPLE

```
int main(void)  
{  
    CURLM *m = curl_multi_init();  
    curl_off_t value;  
  
    curl_multi_get_offt(m, CURLMINFO_XFERS_RUNNING, &value);  
}
```

AVAILABILITY

Added in curl 8.16.0

RETURN VALUE

curl_multi_get_offt(3) returns a CURLMcode indicating success or error.

CURLM_OK (0) means everything was OK, non-zero means an error occurred, see *libcurl-errors(3)*.

SEE ALSO
