

NAME

`_TIFFRewriteField` – rewrite a field in the directory on disk

SYNOPSIS

```
#include <tiffio.h>
```

```
int _TIFFRewriteField(TIFF *tif, uint16_t tag, TIFFDataType in_datatype, tmsize_t count, void  
*data)
```

DESCRIPTION

`_TIFFRewriteField()` Rewrite a field in the directory on disk without regard to updating the TIFF directory structure in memory. Currently only supported for field that already exist in the on-disk directory. Mainly used for updating stripoffset / stripbytecount values after the directory is already on disk.

RETURN VALUES

Returns zero on failure, and one on success.
