

NAME

afCloseFile – close an open audio file

SYNOPSIS

```
#include <audiofile.h>
```

```
int afCloseFile(AFfilehandle file);
```

PARAMETERS

file is a valid file handle created by **afOpenFile(3)**.

DESCRIPTION

afCloseFile closes the audio file *file*, updating the file if it was opened for writing.

RETURN VALUE

afCloseFile returns 0 if the file was closed properly and -1 if an error occurred while closing the file.

ERRORS

afCloseFile can generate these possible errors:

- AF_BAD_FILEHANDLE
- AF_BAD_LSEEK
- AF_BAD_WRITE

SEE ALSO
