

**NAME**

arptables-save — dump arptables rules to stdout (nft-based)

**SYNOPSIS**

**arptables-save** [**-M** *modprobe*] [**-c**]

**arptables-save** [**-V**]

**DESCRIPTION**

**arptables-save** is used to dump the contents of an ARP Table in easily parseable format to STDOUT. Use I/O-redirection provided by your shell to write to a file.

**-M, --modprobe** *modprobe\_program*

Specify the path to the modprobe program. By default, arptables-save will inspect /proc/sys/kernel/modprobe to determine the executable's path.

**-c, --counters**

Include the current values of all packet and byte counters in the output.

**-V, --version**

Print version information and exit.
