

NAME

audit_close – Close the audit netlink socket connection

SYNOPSIS

```
#include <libaudit.h>
```

```
void audit_close(int fd);
```

DESCRIPTION

audit_close() closes the NETLINK_AUDIT socket that communicates with the kernel part of the Linux Audit Subsystem. *fd* must have been returned by **audit_open(3)**.

RETURN VALUE

None.

SEE ALSO

audit_open(3), **netlink(7)**.
