

NAME

`audit_flag_to_name` – Convert the numeric rule-matching filter value to the rule-matching filter name

SYNOPSIS

```
#include <libaudit.h>
```

```
const char *audit_flag_to_name(int flag);
```

DESCRIPTION

audit_flag_to_name() converts the numeric rule-matching filter value (AUDIT_FILTER_TASK, AUDIT_FILTER_EXIT, AUDIT_FILTER_USER, AUDIT_FILTER_EXCLUDE, AUDIT_FILTER_FS) to the rule-matching filter name ("task", "exit", "user", "exclude", "filesystem"). *flag* is the numeric rule-matching filter value.

RETURN VALUE

Returns NULL if an error occurs; otherwise, the return value is the rule-matching filter name.
