

NAME

audit_is_enabled – judge whether auditing is enabled or not

SYNOPSIS

```
#include <libaudit.h>
```

```
int audit_is_enabled(int fd);
```

DESCRIPTION

audit_is_enabled() judges whether auditing is enabled or not. *fd* must have been returned by **audit_open(3)**.

RETURN VALUE

This function will return 0 if auditing is NOT enabled and 1 if enabled, and -1 on error.

SEE ALSO

audit_set_enabled(3).
