

NAME

`audit_name_to_flag` – Convert the rule-matching filter name to the numeric rule-matching filter value

SYNOPSIS

```
#include <libaudit.h>
```

```
int audit_name_to_flag(const char*flag);
```

DESCRIPTION

`audit_name_to_flag()` converts the rule-matching filter name ("task", "exit", "user", "exclude", "filesystem") to the numeric rule-matching filter value (AUDIT_FILTER_TASK, AUDIT_FILTER_EXIT, AUDIT_FILTER_USER, AUDIT_FILTER_EXCLUDE, AUDIT_FILTER_FS). *flag* is the rule-matching filter name.

RETURN VALUE

Returns -1 if an error occurs; otherwise, the return value is the numeric rule-matching filter value.

SEE ALSO

`audit_flag_to_name(3)`,
