

NAME

audit_request_signal_info – Request signal info for the audit system

SYNOPSIS

```
#include <libaudit.h>
```

```
int audit_request_signal_info(int fd);"
```

DESCRIPTION

audit_request_signal_info requests that the kernel send information about the sender of a signal to the audit daemon. The signal info structure is as follows:

```
struct audit_sig_info {
    uid_t    uid;
    pid_t    pid;
    char     ctx[0];
};
```

This function is likely to be used only by audit daemons and shouldn't be called by any other kind of program.

RETURN VALUE

The return value is ≤ 0 on error, otherwise it is the netlink sequence id number. This function can have any error that sendto would encounter.

SEE ALSO

audit_open(3), **audit_get_reply(3)**.
