

NAME

`audit_syscall_to_name` – Convert the numeric syscall value to the syscall name

SYNOPSIS

```
#include <libaudit.h>
```

```
const char *audit_syscall_to_name(int sc, int machine);
```

DESCRIPTION

audit_syscall_to_name() converts the numeric syscall value to the syscall name. *sc* is the numeric syscall value. *machine* is the enum value of the machine type defined in `machine_t`. *machine* can be obtained by calling **audit_detect_machine(3)**.

RETURN VALUE

Returns NULL if an error occurs; otherwise, the return value is the syscall name.

SEE ALSO

audit_name_to_syscall(3), **audit_detect_machine(3)**.
