

**NAME**

audit\_update\_watch\_perms – update permissions field of watch command

**SYNOPSIS**

```
#include <libaudit.h>
```

```
int audit_update_watch_perms(struct audit_rule_data *rule,int" perms);"
```

**DESCRIPTION**

audit\_update\_watch\_perms adds the permission checks to a watch command that is being built. The perms are a bitwise or'ing of: AUDIT\_PERM\_EXEC, AUDIT\_PERM\_WRITE, AUDIT\_PERM\_READ, AUDIT\_PERM\_ATTR.

**RETURN VALUE**

Returns a number < 0 if an error occurs; otherwise, 0 for success.

**SEE ALSO**

**audit\_add\_rule\_data(3), audit\_add\_watch(3).**
