

NAME

auparse_feed_age_events – check events for complete based on time.

SYNOPSIS

```
#include <auparse.h>
```

```
void auparse_feed_age_events(auparse_state_t *au);"
```

DESCRIPTION

auparse_feed_age_events should be called to see if any events are complete based on the current clock time. Any newly complete events will be passed to the callback function.

RETURN VALUE

None.
