

NAME

`auparse_feed_has_data` – check if there is any data accumulating that might need flushing.

SYNOPSIS

```
#include <auparse.h>
```

```
int auparse_feed_has_data(const auparse_state_t *au);"
```

DESCRIPTION

`auparse_feed_has_data` may be called to determine if there is any records that are accumulating but not yet ready to emit.

RETURN VALUE

Returns 1 if any records are accumulating otherwise 0 if empty.

SEE ALSO

`auparse_feed(3)`, `auparse_feed_age_events(3)`
