

NAME

auparse_find_field_next – find next occurrence of field name

SYNOPSIS

```
#include <auparse.h>
```

```
const char * auparse_find_field_next(const auparse_state_t *au);"
```

DESCRIPTION

auparse_find_field_next finds the next occurrence of the previously stored field name. It will scan until it reaches the last record of the current event.

RETURN VALUE

Returns NULL field not found. If an error occurs errno will be set. Otherwise, it returns a pointer to the text value associated with the field.

SEE ALSO

auparse_first_record(3), auparse_next_event(3), auparse_find_field(3).
