

NAME

auparse_first_field – reposition field cursor

SYNOPSIS

```
#include <auparse.h>
```

```
int auparse_first_field(const auparse_state_t *au);"
```

DESCRIPTION

auparse_first_field repositions the library's internal cursor to point to the first field of the current record in the current event.

RETURN VALUE

Returns 0 if there is no event data; otherwise, 1 for success.

SEE ALSO

auparse_next_field(3).
