

NAME

`auparse_get_field_str` – get current field's value

SYNOPSIS

```
#include <auparse.h>
```

```
const char * auparse_get_field_str(const auparse_state_t *au);"
```

DESCRIPTION

`auparse_get_field_str` allows access to the value in the current field of the current record in the current event.

RETURN VALUE

Returns NULL if an error occurs; otherwise, a pointer to the field's value.

SEE ALSO

`auparse_get_field_name(3)`, `auparse_get_field_int(3)`, `auparse_interpret_field(3)`, `auparse_next_field(3)`.
