

NAME

auparse_get_record_text – access unparsed record data

SYNOPSIS

```
#include <auparse.h>
```

```
const char * auparse_get_record_text(const auparse_state_t *au);"
```

DESCRIPTION

auparse_get_record_text returns a pointer to the full unparsed record.

RETURN VALUE

Returns NULL if an error occurs; otherwise, a pointer to the record.

SEE ALSO

auparse_next_record(3).
