

NAME

auparse_next_field – move field cursor

SYNOPSIS

```
#include <auparse.h>
```

```
int auparse_next_field(const auparse_state_t *au);"
```

DESCRIPTION

auparse_next_field moves the library's internal cursor to point to the next field in the current record of the current event.

RETURN VALUE

Returns 0 if no more fields exist and 1 for success.

SEE ALSO

auparse_next_record(3).
