

NAME

auparse_reset – reset audit parser instance

SYNOPSIS

```
#include <auparse.h>
```

```
int auparse_reset(auparse_state_t *au);"
```

DESCRIPTION

auparse_reset resets all internal cursors to the beginning. It closes files, descriptors, and frees memory buffers.

RETURN VALUE

Returns -1 if an error occurs; otherwise, 0 for success.

SEE ALSO

auparse_init(3), auparse_destroy(3).
