

NAME

ausearch_next_event – find the next event that meets search criteria

SYNOPSIS

```
#include <auparse.h>
```

```
int ausearch_next_event(auparse_state_t *au);"
```

DESCRIPTION

ausearch_next_event will scan the input source and evaluate whether any record in an event contains the data being searched for. Evaluation is done at the record level.

RETURN VALUE

Returns -1 if an error occurs, 0 if no matches, and 1 for success.
