

NAME

clamsubmit – File submission utility for ClamAV

SYNOPSIS

clamsubmit [options]

DESCRIPTION

clamsubmit submits files to Sourcefire for further analysis.

OPTIONS

-h, -? Display help to stderr and exit.

-e EMAIL

Required option for setting the email address for the submission.

-n FILE

Submit a file that reports as a false negative (ClamAV reports CLEAN). FILE can be – to specify stdin. Mutually exclusive with –p.

-N NAME

Required option for setting the name of the sender for the submission.

-p FILE

Submit a file that reports as a false positive (ClamAV flags the file as virus). FILE can be – to specify stdin. Mutually exclusive with –n.

-V VIRUS

The name of the virus detected as false positive. This option is required for false positive submissions.

ENVIRONMENT VARIABLES

clamsubmit uses the following environment variables:

CURL_CA_BUNDLE

(Linux/Unix only, excluding macOS) May be set to the path of a file (bundle) containing one or more CA certificates. This will override the default openssl certificate path.

Note that the CURL_CA_BUNDLE environment variable is also used by the curl command line tool for the same purpose.
