

NAME

copydatabase – Perform a document-by-document copy of one or more Xapian databases

SYNOPSIS

copydatabase *SOURCE_DATABASE... DESTINATION_DATABASE*

DESCRIPTION

copydatabase – Perform a document-by-document copy of one or more Xapian databases

OPTIONS**--no-renumber**

Preserve the numbering of document ids (useful if you have external references to them, or have set them to match unique ids from an external source). If multiple source databases are specified and the same docid occurs in more one, the last occurrence will be the one which ends up in the destination database.

--help display this help and exit

--version

output version information and exit
