

NAME

docker-push - Upload an image to a registry

SYNOPSIS

docker push [OPTIONS] NAME[:TAG]

DESCRIPTION

Alias for **docker image push**.

OPTIONS

-a, --all-tags[=false] Push all tags of an image to the repository

--platform="" Push a platform-specific manifest as a single-platform image to the registry. Image index won't be pushed, meaning that other manifests, including attestations won't be preserved.
'os[/arch[/variant]]': Explicit platform (eg. linux/amd64)

-q, --quiet[=false] Suppress verbose output
