

NAME

env.eselect – The environment and ld.so.cache management module for Gentoo's eselect

SYNOPSIS

eselect env [**help**|**usage**|**version**]

eselect env update [**noldconfig**]

DESCRIPTION

eselect is Gentoo's configuration and management tool. It features modules that care for the individual administrative tasks.

ACTION: UPDATE

eselect env update [**noldconfig**]

Parses all files in /etc/env.d/ for their environment variables and assembles them to one file (/etc/profile.{env,csh}). Further, it creates ld.so.conf/ld-elf.so.hints and prelink.conf based on the collected vars, unless option **noldconfig** is specified.

```
# eselect env update
Regenerating /etc/ld.so.cache...
```
