

NAME

auparse_get_field_int – get current field's value as an int

SYNOPSIS

```
#include <auparse.h>
```

```
int auparse_get_field_int(auparse_state_t *au);"
```

DESCRIPTION

auparse_get_field_int allows access to the value as an int of the current field of the current record in the current event.

RETURN VALUE

Returns -1 if there is an error with errno set appropriately or the value if errno is zero.

SEE ALSO

auparse_get_field_str(3).
