

NAME

`auparse_timestamp_compare` – compares timestamp values

SYNOPSIS

```
#include <auparse.h>
```

```
int auparse_timestamp_compare(const au_event_t *e1, const au_event_t *e2);
```

DESCRIPTION

`auparse_timestamp_compare` compares the values of 2 timestamps.

RETURN VALUE

Returns -1, 0, or 1 respectively depending on whether e2 is less than, equal to, or greater than e1.

SEE ALSO

`auparse_get_timestamp`(3).
