

NAME

capng_set_rootid – set namespace root id

SYNOPSIS

```
#include <cap-ng.h>
```

```
int capng_set_rootid(int rootid);
```

DESCRIPTION

capng_set_rootid sets the rootid for file capabilities operations. Pass CAPNG_UNSET_ROOTID to clear a previously selected namespace root id and go back to writing regular V2 file capabilities.

RETURN VALUE

On success, it returns 0. It returns -1 if there is an internal error, the kernel does not support V3 filesystem capabilities, or an invalid rootid is supplied.
