

**NAME**

conjure – interprets and executes scripts written in the Magick Scripting Language (MSL).

**SYNOPSIS**

**magick conjure** [*options*] *script.msl*

**OVERVIEW**

The **conjure** program is a member of the ImageMagick(1) suite of tools. Use it to process a Magick Scripting Language (MSL) script. The Magick scripting language (MSL) will primarily benefit those that want to accomplish custom image processing tasks but do not wish to program, or those that do not have access to a Perl interpreter or a compiler.

For more information about the conjure command, point your browser to file:///usr/share/doc/ImageMagick-7/www/conjure.html or <https://imagemagick.org/script/conjure.php>.

**DESCRIPTION**

Image Settings:

|                  |                                              |
|------------------|----------------------------------------------|
| -monitor         | monitor progress                             |
| -quiet           | suppress all warning messages                |
| -regard-warnings | pay attention to warning messages            |
| -seed value      | seed a new sequence of pseudo-random numbers |
| -verbose         | print detailed information about the image   |

Miscellaneous Options:

|               |                                            |
|---------------|--------------------------------------------|
| -debug events | display copious debugging information      |
| -help         | print program options                      |
| -log format   | format of debugging information            |
| -list type    | print a list of supported option arguments |
| -version      | print version information                  |

In addition, define any key value pairs required by your script. For example,

```
conjure -size 100x100 -color blue -foo bar script.msl
```
