

NAME

devlink-monitor – state monitoring

SYNOPSIS

devlink monitor [**all** | *OBJECT-LIST*]

DESCRIPTION

The **devlink** utility can monitor the state of devlink devices and ports continuously. This option has a slightly different format. Namely, the **monitor** command is the first in the command line and then the object list.

OBJECT-LIST is the list of object types that we want to monitor. It may contain **v**, **port**, **health**, **trap**, **trap-group**, **trap-policer**.

devlink opens Devlink Netlink socket, listens on it and dumps state changes.
