

NAME

docker-stack-deploy - Deploy a new stack or update an existing stack

SYNOPSIS

docker stack deploy [OPTIONS] STACK

DESCRIPTION

Deploy a new stack or update an existing stack

OPTIONS

- c, --compose-file=[]** Path to a Compose file, or "-" to read from stdin
- d, --detach[=true]** Exit immediately instead of waiting for the stack services to converge
- prune[=false]** Prune services that are no longer referenced
- q, --quiet[=false]** Suppress progress output
- resolve-image="always"** Query the registry to resolve image digest and supported platforms
("always", "changed", "never")
- with-registry-auth[=false]** Send registry authentication details to Swarm agents
