

NAME

DROP_TEXT_SEARCH_PARSER – remove a text search parser

SYNOPSIS

DROP TEXT SEARCH PARSER [IF EXISTS] *name* [CASCADE | RESTRICT]

DESCRIPTION

DROP TEXT SEARCH PARSER drops an existing text search parser. You must be a superuser to use this command.

PARAMETERS**IF EXISTS**

Do not throw an error if the text search parser does not exist. A notice is issued in this case.

name

The name (optionally schema-qualified) of an existing text search parser.

CASCADE

Automatically drop objects that depend on the text search parser, and in turn all objects that depend on those objects (see Section 5.15).

RESTRICT

Refuse to drop the text search parser if any objects depend on it. This is the default.

EXAMPLES

Remove the text search parser my_parser:

```
DROP TEXT SEARCH PARSER my_parser;
```

This command will not succeed if there are any existing text search configurations that use the parser. Add CASCADE to drop such configurations along with the parser.

COMPATIBILITY

There is no **DROP TEXT SEARCH PARSER** statement in the SQL standard.

SEE ALSO

ALTER TEXT SEARCH PARSER (**ALTER_TEXT_SEARCH_PARSER(7)**), CREATE TEXT SEARCH PARSER (**CREATE_TEXT_SEARCH_PARSER(7)**)
