

NAME

`auparse_get_line_number` – get line number where record was found

SYNOPSIS

```
#include <auparse.h>
```

```
unsigned int auparse_get_line_number(const auparse_state_t *au);"
```

DESCRIPTION

`auparse_get_line_number` will return the source input line number for the current record of the current event. Line numbers start at 1. If the source input type is `AUSOURCE_FILE_ARRAY` the line numbering will reset back to 1 each time a new line in the file array is opened.

RETURN VALUE

Returns the line number. Line numbers are 1 based, a zero value indicates the line number information is unavailable.

SEE ALSO

`auparse_get_filename(3)`. `auparse_next_record(3)`.
