

NAME

ctermid – get controlling terminal name

LIBRARY

Standard C library (*libc*, *-lc*)

SYNOPSIS

```
#include <stdio.h>
```

```
char *ctermid(char *s);
```

Feature Test Macro Requirements for glibc (see **feature_test_macros(7)**):

```
ctermid():
```

```
_POSIX_C_SOURCE
```

DESCRIPTION

ctermid() returns a string which is the pathname for the current controlling terminal for this process. If *s* is NULL, a static buffer is used, otherwise *s* points to a buffer used to hold the terminal pathname. The symbolic constant **L_ctermid** is the maximum number of characters in the returned pathname.

RETURN VALUE

The pointer to the pathname.

ATTRIBUTES

For an explanation of the terms used in this section, see **attributes(7)**.

Interface	Attribute	Value
ctermid()	Thread safety	MT-Safe

STANDARDS

POSIX.1-2008.

HISTORY

POSIX.1-2001, Svr4.

BUGS

The returned pathname may not uniquely identify the controlling terminal; it may, for example, be */dev/tty*.

It is not assured that the program can open the terminal.
